DATACENTER

by cegecom

Get more flexibility
with our hosting solutions

Our **DATACENTER** solutions and services provide the optimal conditions to protect your data and servers. Located in Luxembourg and Germany, our data centres use state-of-the-art technologies and meet the highest requirements in terms of security and availability: Tier IV and Tier III, redundant connection to our own backbone, electronic and biometric access controls, uninterrupted power feed with emergency generator, air-conditioning and professional fire detection system.

From simple racks – from 10 to 47 height units - to private cages and rooms and provision of hard- and software solutions, our offers are flexible, modular and on-demand customisable. You choose the best solution for you and can adapt it later to cope with the expansion of your IT capacities and the growth of your company. You pay as you grow.

Whatever your choice may be, you can combine our hosting services with our **ONLINE** and/or **CONNECT** solutions. You increase your data security and accessibility by transmitting them exclusively through our own network.

Datacenter Rack

secure and professional
storage in 19" server racks

Technical features
